

CHAPTER 3: TRAFFIC/CIRCULATION DATA

This chapter will be developed further in the next update.

Existing. The tribe purchased traffic counters, Planning and Public Works staff was trained by BIA IRR staff to use the counters, and one set of traffic counts was actually completed with the plan to count the higher priority roads (every road section requires a count) for the LRTP update and count the lower priority roads for the next update. However, complications with the next set of counts in addition to lack of capacity to resolve the complications caused the traffic counting program to cease operation.

Needs. Develop an effective short-term and long-term traffic counting program in context with other transportation planning.
